

PREGAME PHASE

1. Project Identification :
 - Talkinx.com is a web site which is basically used for anonymous instant messaging between users.
 - Aim is to provide communication between users. At this point, users can communicate their own friends and they can make new friends.
 - Making new friends is a crucial part. Because, most of applications which provide messaging between users start disturbing people, especially women, after a point. For instance, a man who is fifty years old can add a woman who is twenty years old as a friend, even if he do not have any common point with the woman. At this point, we want users can restrict their invisibility. A user can choose a option like that users who are over thirty years old can not communicate with me.
2. Database established on MySQL, Php Language used for implementation, PhpStorm IDE and Eclipse PHP development tools, NGINX and APACHE Web Servers
3. Product Backlog List:
 - Each user has a profile. The profile includes:
 - Profil picture: Each user can have a profile picture and can change his or her profile picture. This is an optional part; if user want to put a photo on profile, then he or she can put a photo.
 - Nick name: Nick name must be unique. Users can choose their own names as nick name, if the name is unused before. Each user must choose a nick name.
 - Saying: In this part, each user can describe what he or she is looking for or can just write his or her own thoughts. Saying is optional part.
 - Gender: Each user must specify his or her gender.
 - Age: Users must define their ages, when they are registering, but they can share their ages, if they want. It is an optional part.
 - Language: Users must define their their native language and languages which are known by them.
 - Relationship status: Users can specify their relationship status.
 - Education information: Each user can specify university which he or she studying.
 - Work information: Each user can specify his or her work and current workplace.
 - Place: Each user can specify place he or she is living.
 - User can only accept messages from only users that they are suitable. If they provide the terms of his/her. This terms can assign from user interface with tags. (e.g. if a girl does not want to talk guys below 18 than se can mark the age tag)
 - Anonymous profile has a serial key with this key any user can add contact list that profile and use messaging service.
 - Each day 10 "like points" giving to every user. They can give these point to anyone. Who have the most like points listed in TT (Top Trend) list and everybody can see their profile.
 - Ignore and report buttons available. Nobody has to chat with a person he/she does not want to talk.
4. Priorities and Estimate the features in Product Backlog List

USER STORIES

1. As a user I want anonymity so that application must supply anonymity.
2. As a user I want group message so that application must supply group message.

3. As a user I want to create my own profile so that application must supply creating my profile easily.
4. As a user I want to change profile avatar/image so that the application must supply change profil avatar/image.
5. As a user I want to see message history so that application must supply to see the message history.
6. As a user I want to speak the other users so that application must supply platform to speak the other people.
7. As a user I want to add friend so that application must supply adding friend.
8. As a user I want to have connection both users who I know and users who I do not know so that application must supply both making new friends and communicating my own friends.
9. As a user I want to restrict my visibility so that every user must not connect with me.
10. As a user I want to see the other profiles so that application must supply to see the other profiles.

Product Backlog

User Story ID	Business Value Priority	Estimated Effort
1	40	4
3	20	4
4	5	2
5	12	3
10	30	7
////////	////////	////////
7	13	2
8	30	8
9	22	5
2	15	9
6	18	6

First Sprint Backlog

First Sprint Goal :

- Allow users to chat each other anonymously
- Allow users to upload photos and update their profiles
- Allow users register and login to website

MVP

The MVP that we desired is a working web site which allows to its users chatting anonymously and having their own profile.

DoD(Definition of Done)

- All code is working
- All unit tests passed
- Robostness under server traffic
